The clinical situation before the treatment of 78 years old man
OPG before the treatment in upper jaw
The situation after implant installation

**Note** the buccal placement of the two BCS implants in order to compensate for the interarch discrepancies between the upper and the lower jaw.
X-ray after implant insertion
Impression caps positioned on the implants
The impression with implant analogues
The metal-plastic restoration
Control x-ray to check for any cement remnants
Note the good fit of the metal frame
**Left**- far right distal abutment, **Right**-far left distal abutment
The frontal view of the restoration permanently fixed on the implants 48 hours after the beginning of the treatment.
The buccal view of the area of the BCS implants.
Extraoral view **48 hours** after the initiation of the treatment
